A MOST DARING OFFER

U.S. Department of Agr

Way Below Advertised Prices

Smash! goes all precedent. I'm making this positively the **Biggest Bargain** ever offered.

Fruit trees I could easily sell at twice the price asked in my catalogue, but I have decided to do this just for the advertising and call the loss of profits advertising expense.

I want to see every grower in your community growing nothing but Planters trees. Trees like I'll ship you will cause every fellow to sit up and take notice. You'll tell them what a bargain you got and where you bought them. See, that's where I come in—more sales.

Another thing—I really have the stock I'm listing here—plenty of it. No disappointment and no substitution. Everything **Guaranteed True to Name**

Further, I'll prove what I have said so that you can not have a single doubt about this being the biggest offer.

Yes, Sir, I warrant every tree taken from this list, to be healthy, strong, large roots (especially the smaller sizes, 2 to 3 feet and 3 to 4 feet,) all ready to start off growing immediately after planting; to be satisfactory and delivered to you in good condition.

Proper Selection Increases Profits

The way to make big profits is to buy varieties of proven values. those that are hardy, good bearers. I have selected such for this offer which are considered the best and are my leading sellers. You can't go wrong on any or all of them.

Now get me right on this: I'm not offering you culls or seconds. Every tree is as good as you can buy anywhere I don't care what you pay. If you miss, this opportunity you'll be throwing away real money. Better order NOW.

Alton—Large, semi-free, juicy, melts in your mouth, creamy white with spatches of red.

Capt. Ede.—Big showy yellow freestone, ripens directly after Elberta.

Belle of Georgia—Leader of all white peaches; freestone, bears heavily and ripens about Aug. 1. I couldn't sell you a better white peach. You simply can't have two many of this variety.

Blood Freestone—One of the earliest freestones; flesh of reddish yellow. The king of all early peaches. Be sure to include these in your order.

Carman—A really beautiful peach, averages 2¼ inches in diameter; fine, rich, juicy, most appetizing. Succeeds where more tender kinds fail.

Champion—This large white freestone is certainly well named. In 1887-88 Champion trees growing in Nebraska stood a freeze of 18 degrees below zero and bore an abunant crop the following year. Three years later, when other peach trees had failed the Champion produced a second crop.

It ripens last of July. The fruit is large and lucious. It has a delicious flavor which makes it a universal favorite. The fruit does not stand long shipments, but the Champion is a profitable commerical peach where it can be sold in nearby markets.

Chinese Cling—A large creamy white peach. Unexcelled for quality.

Crawfords Late—Yellow freestone—flavor rich and sweet—among the best late peaches.

Elberta—Absolutely with exception the best commercial peach on the market today. It has bushed everything else aside. Ask any commercial orchardist what is the best peach, the very best money maker, and without exception he will tell you the Elberta. It is also a first-class tree for private use. A few of these in your garden will give you fine peaches for your table.

The tree is a uniform cropper, hardy and productive. The fruit is large, yellow with red cheek; juicy and well flavored and ripens 10 days before the Crawford Late. This bring its ripening period to about Sept. 1st.

Greensboro—Let me put a Greensboro in my mouth and I can forget every trouble. Perfect freestone, resistant to rot. One of the earliest peaches.

Heath Cling — Unexcelled for canning, creamy white, blushed with red, most juicy and delicious. Late.

Henrietta Cling—Very late, yellow, hardy.

Krummel's October—A dandy yellow peach, deep color, very hardy; fruit hangs on better than most varieties.

Mamie Ross—You'll get a crop from this variety when others are winter killed. Bears until the branches fairly groan with their money making burden. Large, rich, delightful, early.

Mayflower—The earliest peach of all. A handsome red peach of high quality.

Elberta Cling—I wont try to tell anything about this cling; everybody knows it is the leading and most highly prized of all clings.

Late Elberta—A valuable peach for prolonging the Elberta season.

Early Elberta — My opinion of the fellow who has not a few or several of these is that he hasn't a complete orchard. Ripens after Foster. A good yellow peach.

Foster—Do you know there is a tremendous demand for large, orange red peaches, but folks don't know what to grow for a good one. Foster is absolutely the best; fiesh sort of yellowish orange; very rich and juicy, ripens at just the right time to bring big prices; just before Belle of Georgia.

Phillips Cling, Rex, Red Bird Cling, Eureka, Hiley, and McCoy's Free are also good.

April 5th
Will End These Prices

	Each	10	100	1000

Our Positive Guarantee

We guarantee all trees and plants absolutely true to name. We guarantee safe delivery, quality and satisfaction. We take all the risk of pleasing you. If you don't find the stock exactly as described—if you don't find it equal to or better than trees costing from two to five times as much; you may have your money back, including all transportation charges. You to be the judge. Certificate of health with each shipment.

Early Wonder Peach

Here's the boy that made a peach convert. For years I had considered (early) peaches watery half-ripe fruit, not fit for children to eat. Then one fine day I met up with this Early Wonder, a peach that ripens clear to the pit. It's a lucious red fruit with a small pit and a perfectly free stone. When ripe the red juice tinges the white meat with a facinating shade of crimson. Dwarf habit, sturdy and strong, ideal size and shape. Begins bearing the second year and bears annually. I have trees in my orchard fourteen years old that bear as heavily as mere youngsters.

Prices on Early Wonder Peach Only
